

MathPath Annual Competition

11 October 2026 — Items Needing Your Confirmation

We're building out the Annual Competition on the platform based on the schedule, level structure, and rules you've shared with us so far. Before we finish building it, there are **7 specific items** your own materials left open that we need your confirmation on, so the competition works exactly the way you intend on the day. Each item below includes the relevant context and space to write your answer directly on this page — feel free to reply by email instead if that's easier.

1 Does YLP-1 participate in the Annual Competition?

Your competition level chart tells us how YLP-2, YLP-3, and every level from PL-1 onward should be placed into the competition, but it doesn't mention YLP-1. We want to confirm before we build the placement rule: should YLP-1 students take part in the Annual Competition at all, and if so, at which level should they compete?

Your answer:

YLP 2 & 3 will have only direct sums and name it as Bloomers below 8 years , PL-1 will have all the concepts for children above 8 yearsfor students who are in PL-2 & who have completed Lesson 15 in Bridge Module

2 Should YLP and PL-1 students get the same competition paper, or separate ones?

Per your placement chart, YLP-2, YLP-3, *and* PL-1 students are all grouped into the same "YLM" competition category. However, YLP students currently only practice direct sums, while PL-1 students have already moved on to Small Boss and Big Boss concepts. Should all of these students sit the exact same paper (limited to the concepts YLP students know), or do YLP and PL-1 need two separate paper versions within that same category?

Your answer:

refer answer given in Q1 and create accordingly

3 Exact Bridge Module progress cut-offs for competition placement

Your document gives us the four milestones below, but doesn't say what happens to a student *between* two milestones — for example, a student who has cleared Lesson 20 (past Lesson 15, but not yet at Lesson 25). Should a student in that situation be placed at the lower level (PL-1, in that example) until they reach the next milestone, or is there a different rule you'd like us to use?

Bridge Module progress	Competes at
Cleared through Lesson 15	PL-1
Cleared through Lesson 25	PL-2
Cleared through Lesson 35	PL-3
Completed the full Bridge Module	PL-4

Your answer:

yes

4 How should the final score be calculated, and how are ties broken?

We need the exact rule for ranking students within a competition level. A few things to confirm:

- Should ranking be based on number of correct answers, accuracy percentage, completion time, or some combination of these?
- If two students end up tied, what breaks the tie (for example, whoever finished faster)?
- How should sums a student never got to / left unanswered be treated in the score?

Your answer:

accuracy and completion time, If tie to check who made mistake first the latter will win then . If unanswered no marks to be given

5 Who should see competition results, and what should the certificate include?

Once results are ready to be released, we need to know how much of the leaderboard should be visible, and to whom. For example:

- Should students/parents see only the Top 3, Top 10, the full leaderboard for their level, or just their own result?
- Should a parent see the same thing their child sees, or something different?
- What should appear on the certificate/scorecard (student name, level, rank, score, date, centre, etc.)?

Your answer:

Result has to be kept undisclosed till the date of announcement.

6 How many attempts does a student get at the real competition?

Unlike practice mocks (which stay unlimited-attempt), the real competition is a graded, one-time event. Please confirm: is this strictly a single attempt for every student, and if a student has a genuine issue (for example a technical problem that isn't resolved by the automatic reconnect-and-resume we're building), should there be a way for MathPath staff to manually approve a retake, or should every case be handled entirely outside the platform?

Your answer:

Only once unless there is a technical issue from our end

7 The 2:00–2:30 PM slot (and its online equivalents) is too short for IM-4 and MM-2

This is a scheduling conflict in the published timetable itself, not something we're guessing at — we want to flag it clearly and get your call on how to fix it. The three slots below are all 30 minutes long:

Mode	Scheduled slot	Students in this slot
Offline	2:00 – 2:30 PM (30 min)	IM-4, MM-1, MM-2
Online (India)	7:00 – 7:30 PM (30 min)	Same group, outside West Bengal
Online (International)	8:00 – 8:30 PM (30 min)	Same group, international

But per the level-by-level timing you gave us, two of the levels sitting in that 30-minute slot actually need more time than the slot allows:

Level	Time actually needed
IM-4	35 minutes needed
MM-2	40 minutes needed

Could you let us know how you'd like this resolved — for example, extending this slot (and its online equivalents) to 40 minutes for everyone, or splitting IM-4 / MM-1 / MM-2 into their own separate slots with enough time each?

Your answer:

Each student appearing online will be asked to login 10 mins early and then we will start . As each level has its own time limit set the children will do till the time allotted. So for joining we will have a same entry time mentioned rest will follow as per the level time limits as in the platform

Everything else in the schedule, level structure, and section timers you've shared is already understood and is being built as described. These 7 items are the only open questions standing between us and a fully accurate build of the Annual Competition. Thank you!
