

STUDENT PORTAL GUIDE

Finding Your Way Around MathPath

A complete walkthrough of the student learning platform —
for students, parents, and anyone getting ready to begin
the MathPath journey.

Why MathPath Exists

MathPath is built on a simple belief: mental math, trained properly and practiced consistently, builds a kind of confidence that stays with a child far beyond the classroom.

The platform is built around the abacus method — a time-tested way of training the mind to see and solve numbers quickly, without relying on a calculator. But a method is only as good as the structure around it, and that structure is what MathPath focuses on: clear levels, honest measurement of progress, and enough encouragement built into the experience that practice never feels like a chore.

Every student who logs in moves through the same disciplined path — lessons broken into small, practicable pieces called **DPS sheets** (Daily Practice Sheets), progress that is tracked openly, and assessments that only unlock once the groundwork has genuinely been covered. Nothing is skipped, and nothing is rushed. The platform is designed to reward steady effort over shortcuts.

MASTERY, NOT SPEED

Every level requires real practice before assessment. There is no way to skip ahead.

HONEST PROGRESS

Scores, accuracy, and readiness are shown plainly — to the student and to whoever is guiding them.

MOTIVATION THAT LASTS

Ranks, badges, and friendly leaderboards turn consistency into something worth celebrating.

This guide walks through the student portal exactly as a student will experience it — from the moment they log in, through daily practice, to tracking how far they have come. It is written for students old enough to read it themselves, and for parents who want to understand what their child is doing on the platform each day.

GETTING STARTED

Logging In

Every student is given personal sign-in details — a **Student Code** (or the email/phone number on file) and a password — by their school or by MathPath directly. These credentials are unique to each student and should not be shared, even with siblings using the same device.

The login screen.

1. Open a web browser and go to the MathPath platform address given to you by your school or program coordinator.
2. Make sure the **Student** tab is selected at the top of the login card — the same page also serves Admin and Teacher logins.
3. Enter your Student Email, Phone, or Student Code, along with your password, exactly as provided.
4. Select **Login as Student**. You will land directly on your Dashboard — your personal learning home base.

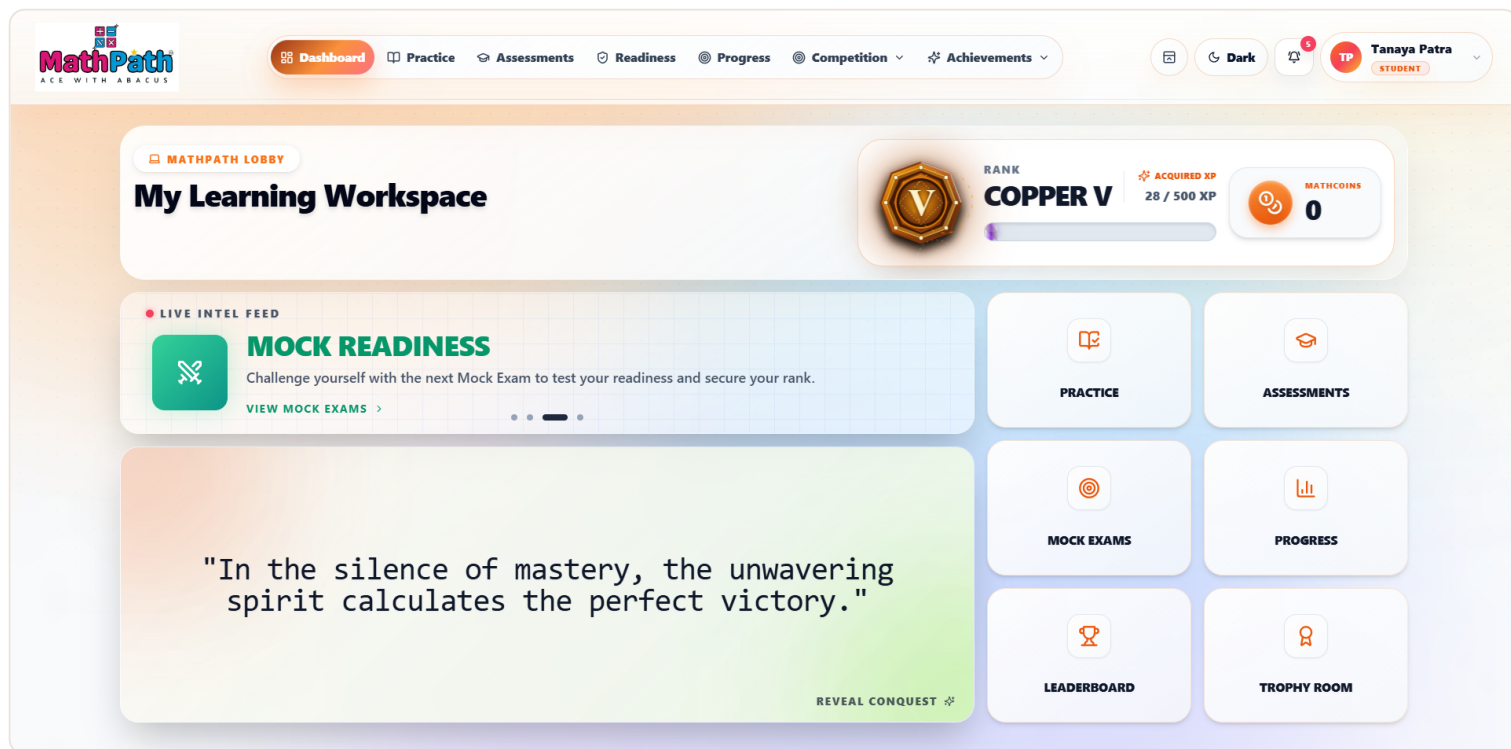

Tip for parents: The login screen itself reads "Forgot Password? Contact your teacher to reset it." Students cannot reset their own password — a teacher or school administrator has to do it on their behalf.

A note on the screenshots in this guide: To show both a brand-new account and a well-established one, this guide uses two different demo students — Tanaya Patra for the first-time, empty-state screens, and Nishant Gantayet for the screens that show real history, such as the Leaderboard and Trophy Room. Your own account will look and work exactly the same either way.

GETTING AROUND

Your Dashboard

The Dashboard — labelled **My Learning Workspace** — is the first thing you see after logging in, and the easiest way back to anything else on the platform. Every other page is one click away from here.

The student Dashboard — rank, XP, and quick access to every part of the platform.

Across the top of every page sits the navigation bar: **Dashboard**, **Practice**, **Assessments**, **Readiness**, **Progress**, **Competition**, and **Achievements**. The last two open a small dropdown — Competition leads to the Leaderboard and Mock Exams, and Achievements leads to the Trophy Room. Clicking the MathPath logo on the far left always brings you back to the Dashboard.

At the center of the page, your current **Rank** and **XP** (experience points) are displayed on a badge — this grows as you complete practice and clear assessments. Below that, a rotating panel highlights whatever is most relevant right now — a newly assigned sheet, an upcoming mock exam, or a motivational note. Underneath, six shortcut cards give one-click access to Practice, Assessments, Mock Exams, Progress, Leaderboard, and the Trophy Room.

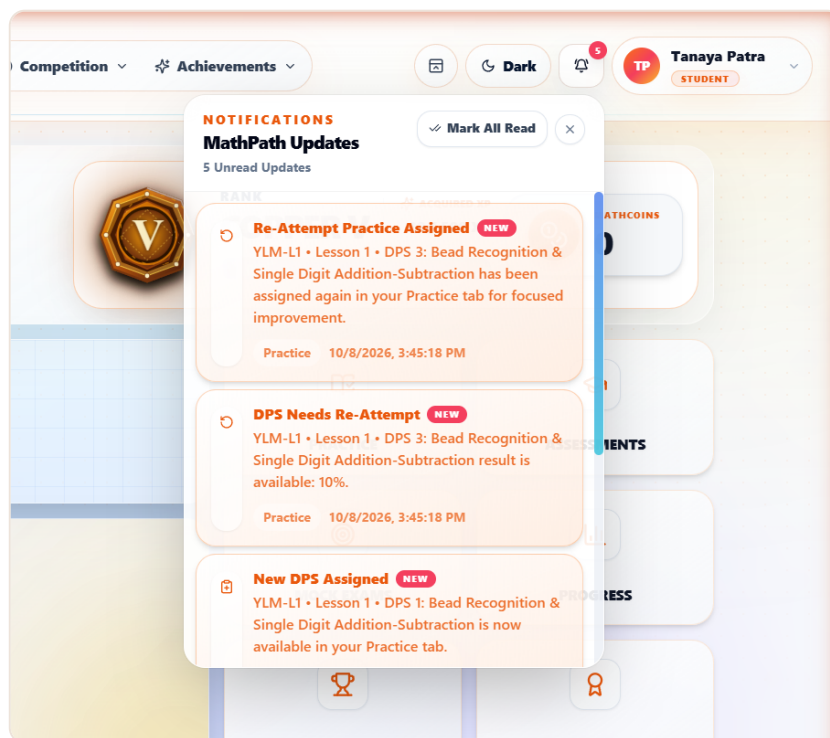

GETTING AROUND

Your Account — Profile, Settings & Notifications

Three icons sit in the top-right corner of every page: a light/dark theme toggle, a notification bell, and your account menu.

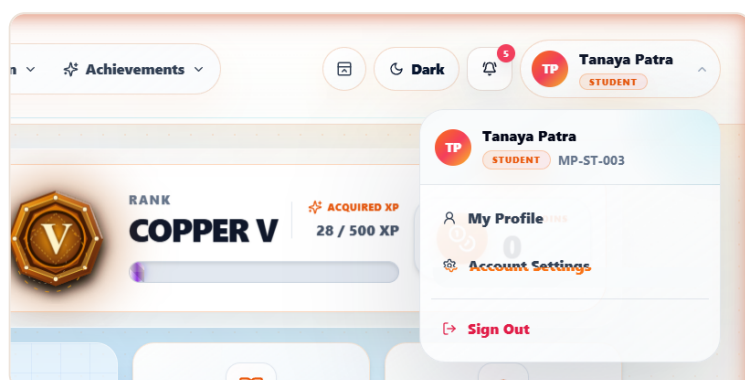

Notifications

The bell icon opens a running list of updates — new DPS sheets assigned, results becoming available, or a sheet flagged for re-attempt. A red badge shows how many updates are unread, and **Mark All Read** clears them once reviewed.

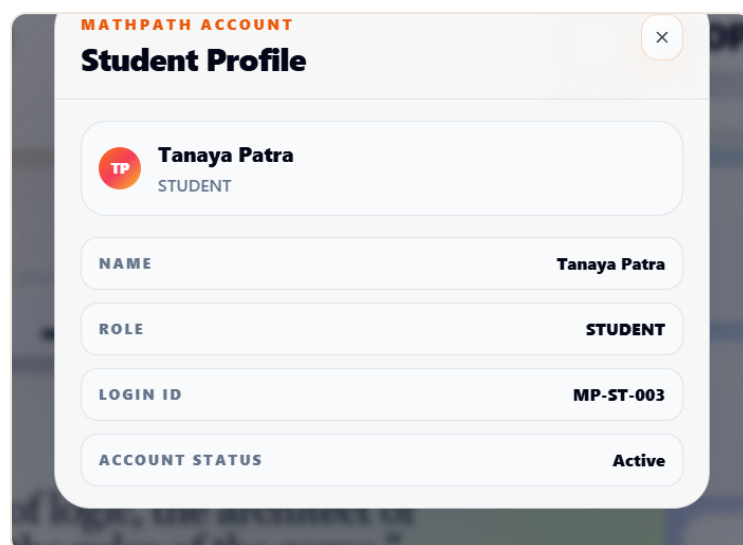

The notifications panel, showing recent practice updates.

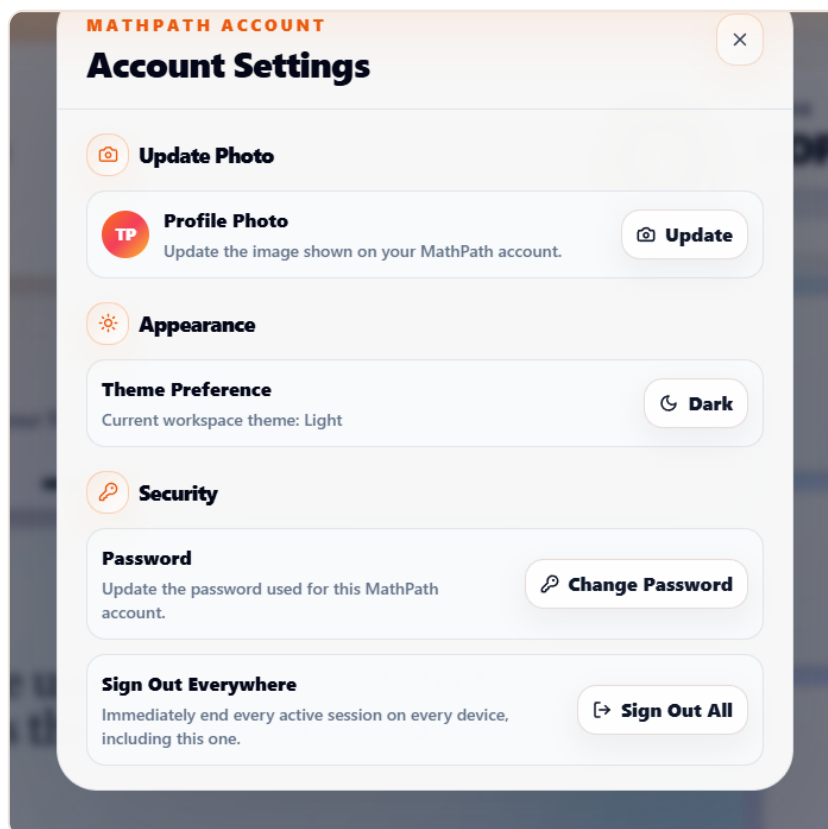

Clicking your name and avatar in the top-right corner opens the account menu, with three options: **My Profile** (a read-only summary of your name, role, Login ID, and account status), **Account Settings** (update your photo, appearance, and password), and **Sign Out**.

Account menu — My Profile, Account Settings, Sign Out.

My Profile — name, role, Login ID, and status.

Account Settings — update your photo, appearance, and password.

Security tip: Account Settings also includes **Sign Out Everywhere** under Security — useful if you've logged in on a shared or public computer and want to make sure no other session stays open.

Practice — Working Through DPS Sheets

The **Practice** page is where day-to-day learning happens. Every lesson on MathPath is broken down into DPS sheets — short, focused sets of questions tied to one specific skill. The page header shows an overview of where you stand: how many sheets exist in total, how many are currently assigned, how many are cleared, pending, or need a re-attempt, and your average accuracy across everything you've completed.

The screenshot displays the 'Practice' page interface. At the top, a 'STUDENT PRACTICE' tab is active. Below it, the 'Assigned Practice' section provides an overview of the student's progress. This is followed by a 'PRACTICE WORK' section titled 'Current DPS Assignments', which lists two specific practice sheets. Each sheet card shows the number of questions, duration, level, and a 'Start Practice' button.

Assigned Practice
Open active DPS work, continue timed attempts, and complete the practice assigned by your teacher.

TOTAL DPS	ASSIGNED DPS	CLEARED DPS	PENDING DPS	NEEDS RE-ATTEMPT	AVERAGE ACCURACY
80	2	0	1	1	—

Current DPS Assignments
Review and begin your assigned practice work below. Start with the highlighted assignment to continue your structured learning journey.

YLM-L1 Lesson 1 - DPS 1 Practice
Lesson 1 · DPS 1
Bead Recognition & Single Digit Addition-Subtraction

Questions	Duration	Level
10	10 min	YLM-L1

Start Practice

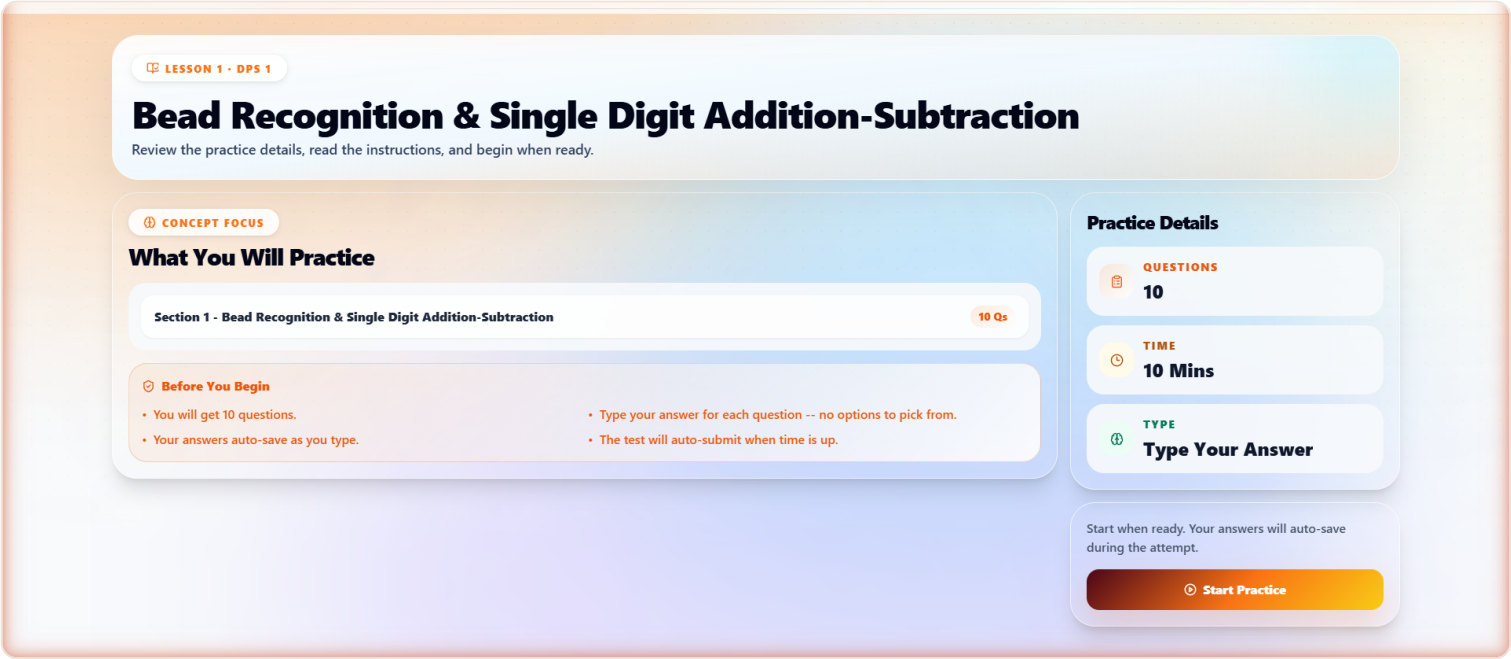

YLM-L1 Lesson 1 - DPS 3 Practice - Re-Attempt 1
Lesson 1 · DPS 3
Bead Recognition & Single Digit Addition-Subtraction

Questions	Duration	Level
10	10 min	YLM-L1

Start Practice

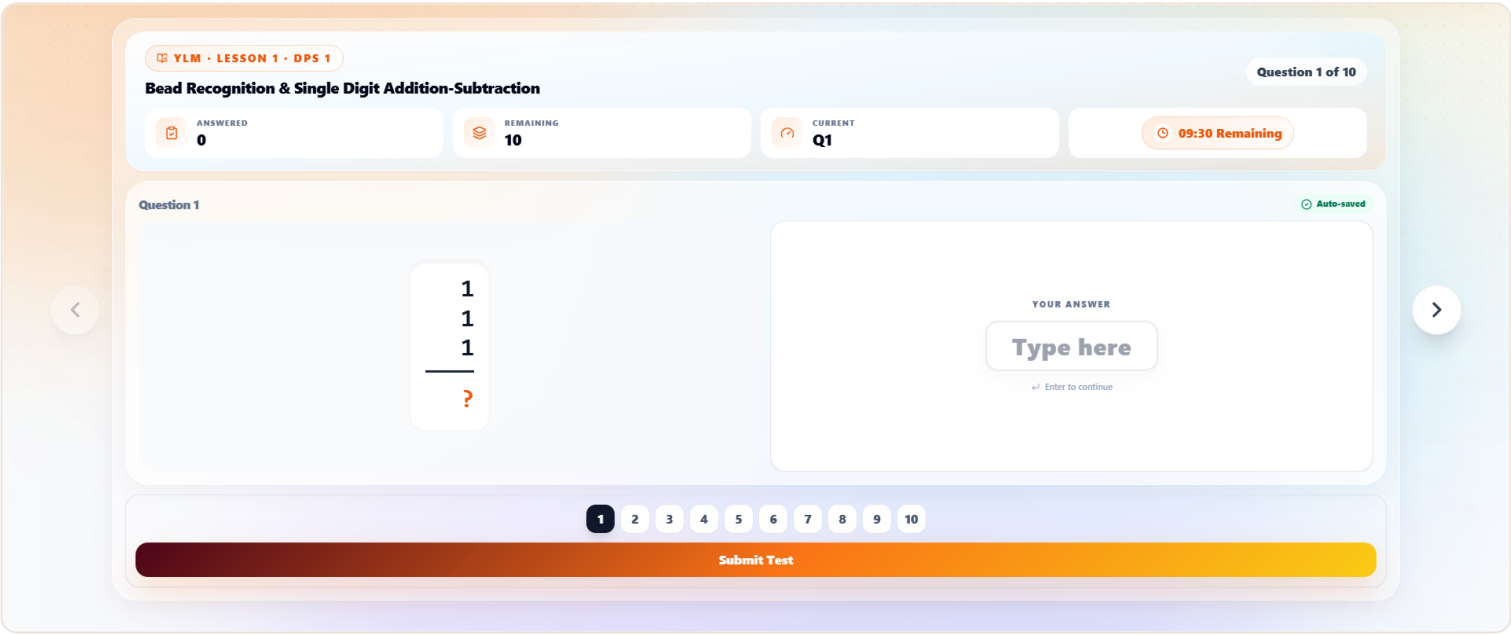

The Practice page — assigned DPS sheets, with clear status at a glance.

Opening any assigned sheet takes you to its instructions page first — what it covers, how many questions to expect, how much time you have, and the ground rules.

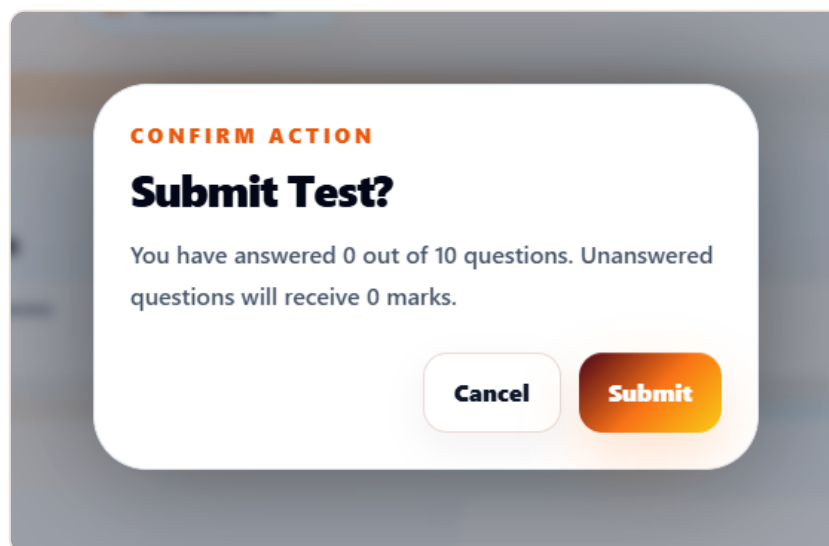

A DPS sheet's instructions page — what to expect before you begin.

Selecting **Start Practice** opens the attempt screen. Each question is shown one at a time, with a number pad at the bottom to jump between questions and a countdown timer running in the header. Answers are typed directly — there are no multiple-choice options — which mirrors the way mental math is meant to be practiced.

The attempt screen — one question at a time, with a visible timer and question tracker.

When you're ready — or when time runs out — selecting **Submit Test** brings up a short confirmation showing how many questions were answered, so nothing is submitted by accident.

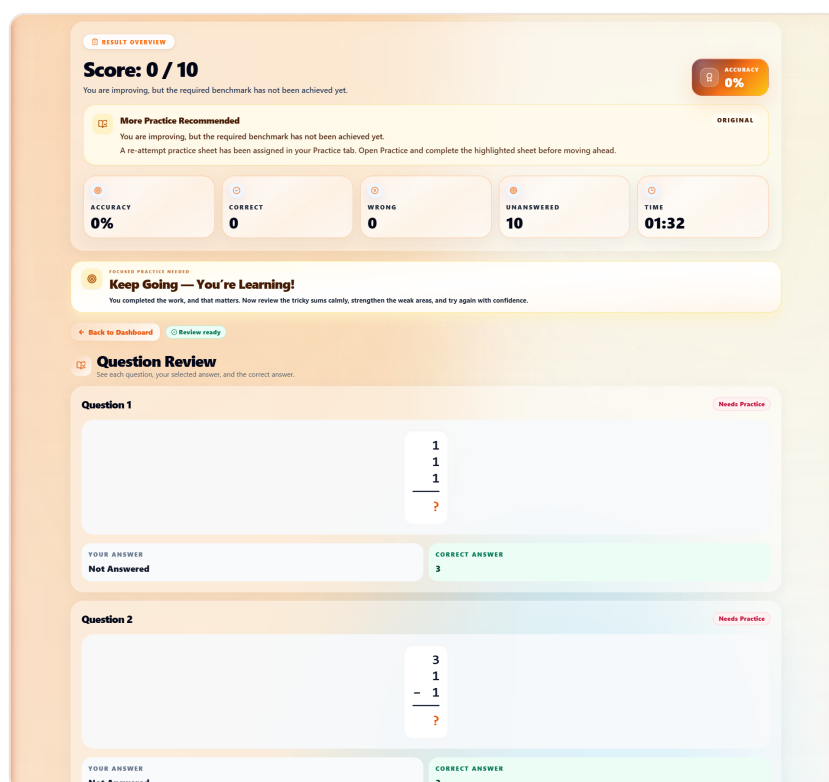

Confirming submission — a last check before the sheet is scored.

DAILY LEARNING

Results & Question Review

As soon as a sheet is submitted, results are ready — no waiting. The results page opens with a clear summary: your score, accuracy, how many questions were correct, wrong, or left unanswered, and how long the attempt took. Underneath, a short message puts the result in context and tells you what to do next.

The results summary — score, accuracy, and next steps, shown plainly.

Below the summary, **Question Review** walks back through every question one by one, showing the question exactly as it was asked, the answer you gave, and the correct answer beside it — a straightforward way to see precisely where things went right or wrong, rather than being left to guess.

Question 3

Needs Practice

7
1
- 2
—
?

YOUR ANSWER

Not Answered

CORRECT ANSWER

6

One entry from the Question Review — your answer and the correct one, side by side.

Why this matters: A sheet that "needs re-attempt" isn't a setback — it's the platform's way of making sure a skill is genuinely solid before building the next one on top of it.

MEASURING MASTERY

Assessments & Assessment Readiness

Once regular practice for a level is complete, a formal **Assessment** becomes available — a more comprehensive check on everything covered so far. The Assessments page lists what's currently assigned, cleared, pending, or flagged for re-attempt, along with your average accuracy across all assessments taken.

Keep Going

Keep Moving Step By Step

Assigned level assessments will appear here when your teacher/admin opens the next assessment step.

Nothing to show yet

Assigned level assessments will appear here.

The Assessments page. Assessments only appear here once a teacher or admin assigns the next step.

Assessments are not opened at will — they are assigned once a student's teacher or admin confirms the level's practice work is genuinely finished. To make that requirement transparent, the **Readiness** page shows precisely what still stands between a student and their next assessment: how many DPS sheets exist for the level, how many are cleared, how many are still pending, and how many need to be re-attempted, broken down sheet by sheet.

Assessment Readiness — a transparent, sheet-by-sheet view of what's left before the next assessment.

This page is worth checking often — it answers the question "am I ready?" honestly, without needing to ask a teacher directly.

Progress — Watching Growth Over Time

The **Progress** page steps back from any single sheet or assessment and shows the bigger picture — how a student's accuracy, consistency, and pace have developed across their time on MathPath. It's the page to open when the question isn't "how did today go?" but "how am I doing overall?"

The Progress page — the long view of a student's development on the platform.

For parents in particular, this is often the most useful page in the whole portal: a single place to see genuine, cumulative growth rather than one day's result in isolation.

STAYING MOTIVATED

Competition — Leaderboard & Mock Exams

Mock Exams are full-length, admin-assigned practice tests, kept deliberately separate from day-to-day DPS practice and assessments. They exist purely to build exam confidence — attempting one has no bearing on a student's regular practice record or promotion between levels. The Mock Exams page tracks how many are assigned, pending, and completed, along with an average score and accuracy across all of them.

MOCK EXAMS

Mock Exams

Attempt Admin-assigned mock exams for your current level. Mock preparation is independent from regular Practice, Assessment Readiness, and Promotion.

Mock Exams — a full library of practice tests, with scores tracked over time.

The **Leaderboard** takes results from these mock exams and turns them into some friendly competition. It can be viewed two ways: **Specific Exam**, ranking students on a single named mock, or **Overall Journey**, ranking students by their average performance across every mock they've completed. Both display a podium for the top three, followed by a full ranked table below. The Leaderboard is scoped to a student's own module and level, so the comparison is always fair.

Leaderboard — ranked by a single mock exam.

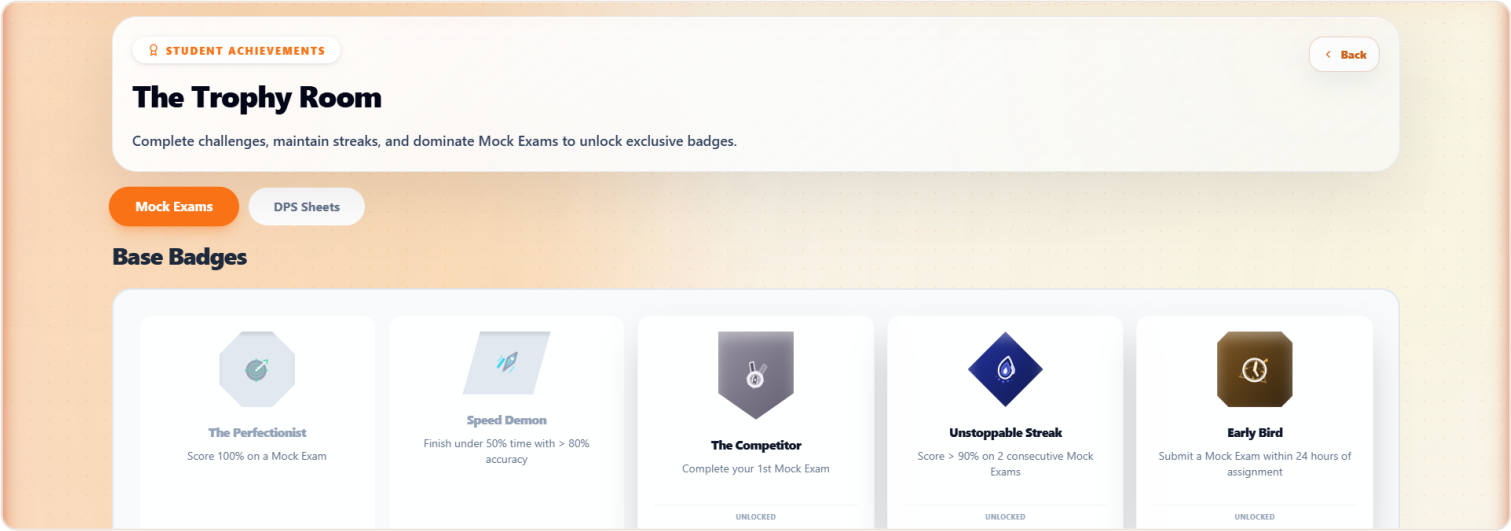

Leaderboard — ranked by overall mock exam average.

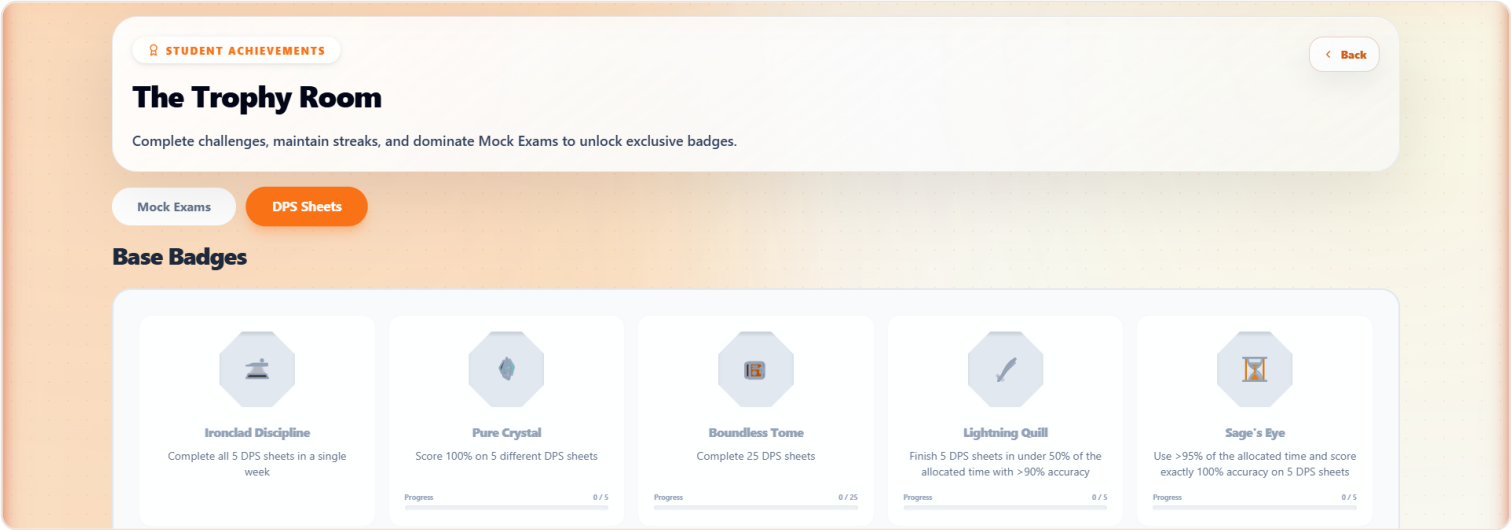

STAYING MOTIVATED

Achievements — The Trophy Room

The **Trophy Room** is where consistency gets recognized. Badges are earned across two separate tracks — **Mock Exams** and **DPS Sheets** — and within each, badges are grouped into four tiers of increasing difficulty: Base, Super, Legendary, and Mythic. Every badge card explains exactly what's required to unlock it, and locked badges show progress toward that goal where relevant.

The Trophy Room — Mock Exams track, Base tier. Badges already earned are marked "Unlocked."

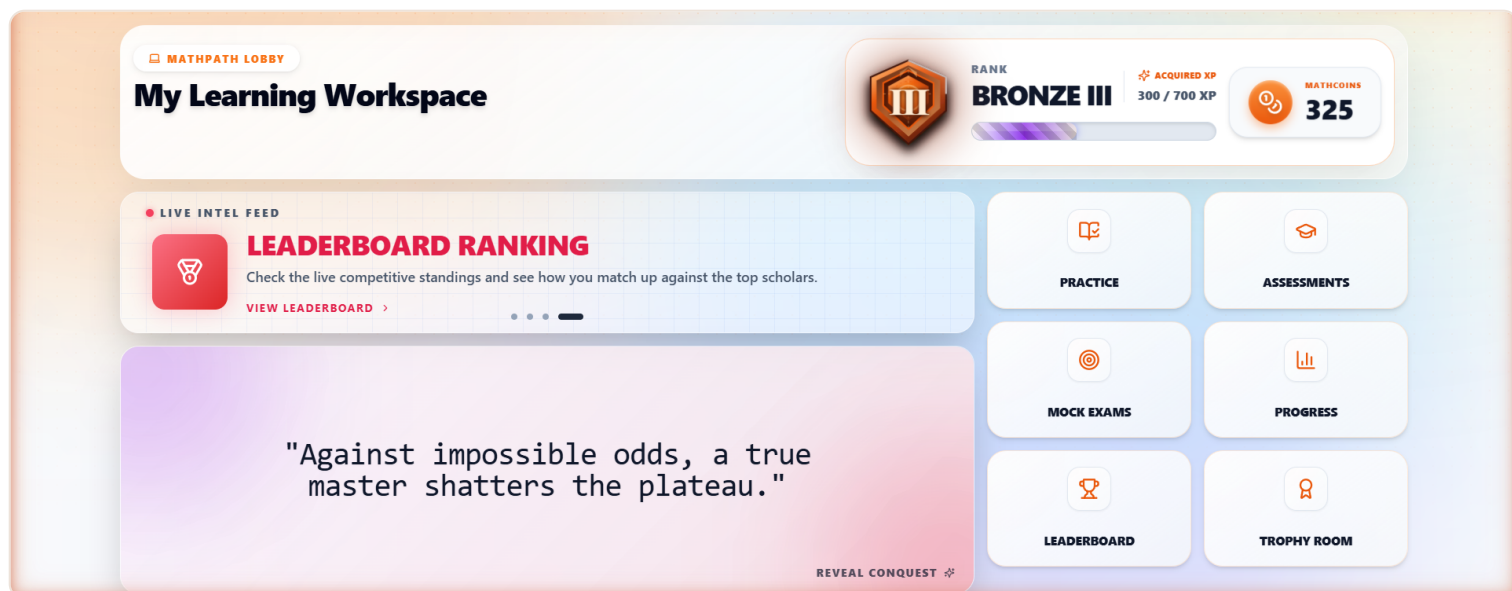

The Trophy Room — DPS Sheets track, Base tier.

LOOKING AHEAD

What It Looks Like As You Grow

The screens in this guide were captured from a student account near the very beginning of its journey, so that every empty state and first-step instruction would be visible clearly. Naturally, a Dashboard fills in over time. Here is the same Dashboard belonging to a student further along — with an established rank, a growing balance of MathCoins, and results already showing up across the Leaderboard.

A Dashboard several levels in — the same layout, shaped by weeks of consistent practice.

Nothing about the platform changes as a student advances — the same pages, the same structure, the same rules apply throughout. What changes is simply the record building up behind them.

Glossary — Terms You'll See

A quick reference for the platform's own vocabulary, gathered in one place.

DPS Sheet	Short for Daily Practice Sheet — a short, focused set of questions covering one specific skill within a lesson. The basic unit of practice on MathPath.
Lesson	A group of DPS sheets covering one topic, such as "Bead Recognition & Single Digit Addition-Subtraction."
Level	A stage within a Module (for example, YLM-L1). A student works through every lesson and DPS sheet in a level before that level's Assessment is assigned.
Module	The broadest grouping of levels — for example, the Young Learners Module or the Master Module.
Assessment	A formal, comprehensive test covering everything in a level. Assigned by a teacher or admin once regular practice is genuinely complete.
Readiness	The transparent, sheet-by-sheet tracker showing exactly what still stands between a student and their next Assessment.
XP	Experience Points, earned through practice and assessments. XP accumulates toward a student's next Rank.
Rank	A tier — such as Copper V or Bronze III — that reflects a student's accumulated XP. Shown on the Dashboard.
MathCoins	A separate in-platform currency earned alongside XP through activity on MathPath, shown on the Dashboard.
Mock Exam	A full-length, admin-assigned practice test kept deliberately separate from regular DPS practice and Assessments, used to build exam confidence.
Leaderboard	A ranking of students by Mock Exam performance, scoped to a student's own module and level so the comparison is always fair.
Trophy Room	The Achievements page, where badges earned across the Mock Exams and DPS Sheets tracks are displayed.
Badge Tiers	Base, Super, Legendary, and Mythic — four tiers of increasing difficulty within each Trophy Room track.

Frequently Asked Questions

Q. I forgot my Login ID or password. What do I do?

A. The login screen itself points to the answer: contact your teacher. Students cannot reset their own password or recover their Login ID from the login screen — a teacher or school administrator has to do it on their behalf.

Q. What happens if the timer runs out before I finish a sheet or exam?

A. Nothing is lost. Answers auto-save as you type, and the attempt auto-submits the moment time is up — whatever was entered up to that point is what gets scored.

Q. A DPS sheet needs a re-attempt. Does that count against me?

A. No. It simply means accuracy on that sheet fell short of the benchmark for the skill. Re-attempting is a normal, expected part of the process — it's the platform making sure a skill is genuinely solid before the next one is built on top of it.

Q. Does a Mock Exam affect my regular practice record or promotion to the next level?

A. No. The Mock Exams page states this directly: mock preparation is independent from regular Practice, Assessment Readiness, and Promotion. Mock Exams exist purely to build exam confidence and friendly competition.

Q. Who can see my results?

A. Your name, rank, and score appear on the Leaderboard, visible to other students working through the same module and level — that is the only place your results are shown to peers. Detailed, question-by-question review is visible only within your own account.

Q. Can I use MathPath on a phone or tablet?

A. This guide was written and captured on a desktop browser, which is the recommended way to use MathPath. If you do use a phone or tablet, the layout may look different from the screenshots here, though the same features apply.

CLOSING NOTE

Getting Help

This guide covers everything a student will encounter in their day-to-day use of the MathPath portal — from logging in for the first time to tracking long-term progress. If a question comes up that isn't answered here, the right first step is always your school or MathPath program coordinator, who can look into account-specific issues directly.

Before reaching out, it helps to know:

- The student's Login ID (found under My Profile)
- The page where the issue occurred
- Roughly when it happened

Thank you for being part of MathPath. Consistent practice, honestly measured, is the whole idea — and everything in this guide exists to make that as clear and encouraging as possible, one sheet at a time.
